-!- CATALYTIC ACTIVITY: ATP + L-Glutamate + tRNA(Glu) = AMP + diphosphate + L-glutamy1-tRNA(Glu).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase

-!- SUBUNIT: The spindle checkpoint complex is composed of MAD1, MAD2 and MAD3. It interacts with CDC20.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE MAD2 FAMILY.
-!- SIMILARITY: Contains 1 HORMA domain.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                贸
